

NGC-212/12-1167

CLAIM AMENDMENTS

1 1. (Currently amended) A method for etching a through via on a wafer of  
2 semiconductor material, wherein the wafer has a front side surface and a backside surface,  
3 comprising:

4 applying a layer of photoresist material to the backside surface of the wafer;  
5 exposing the layer of photoresist to a light source, wherein the developed photoresist  
6 is removed to form at least one via in the remaining photoresist layer;

7 baking the remaining photoresist layer in order to harden the remaining photoresist  
8 layer, wherein the baking of the remaining photoresist layer comprises a first heating step  
9 wherein the remaining photoresist layer is heated at a temperature of about 130°C. to about  
10 135°C. for about one hour, and a second heating step wherein the remaining photoresist  
11 layer is heated at a temperature of about 180°C. to about 190°C. for about one hour, and  
12 wherein the use of the first heating step and the second heating step avoids thermal shock  
13 of the photoresist layer; and

14 gas plasma etching the semiconductor material adjacent to the at least one via to  
15 form a through via between the backside surface and the front side surface of the wafer.

1 2. (Canceled)

1 3. (Original) The method according to claim 1, further comprising removing the  
2 hardened photoresist layer from the backside surface of the wafer, after the step of gas  
3 plasma etching the through via between the backside surface and the front side surface of  
4 the wafer.

1 4. (Original) The method according to claim 3, further comprising applying a layer  
2 of conductive material to at least a portion of a surface of the through via, after the step of

NGC-212/12-1167

3 removing the hardened photoresist layer from the backside surface of the wafer.

1 5. (Original) The method according to claim 1, wherein the plasma etching is  
2 conducted at a microwave power level in the range of about 700 watts to about 900 watts.

1 6. (Original) The method according to claim 1, wherein the plasma etching is  
2 conducted at a radio frequency power level in the range of about 300 watts to about 500  
3 watts.

1 7. (Original) The method according to claim 1, wherein the plasma etching is  
2 conducted at a temperature in the range of about 130°C. to about 170°C.

1 8. (Original) The method according to claim 1, wherein the gas is a mixture of  
2 hydrogen gas, argon gas, boron trichloride gas, and hydrogen bromide gas.

1 9. (Previously presented) The method according to claim 8, wherein the hydrogen  
2 gas flows at a rate in the range of about 6 standard cubic centimeter per minute to about 10  
3 standard cubic centimeters per minute.

1 10. (Previously presented) The method according to claim 8, wherein the argon gas  
2 flows at a rate in the range of about 15 standard cubic centimeter per minute to about 20  
3 standard cubic centimeters per minute.

1 11. (Previously presented) The method according to claim 8, wherein the boron  
2 trichloride gas flows at a rate in the range of about 1 standard cubic centimeter per minute  
3 to about 5 standard cubic centimeters per minute.

1 12. (Previously presented) The method according to claim 8, wherein the hydrogen  
2 bromide gas flows at a rate in the range of about 50 standard cubic centimeters per minute

NGC-212/12-1167

3 to about 80 standard cubic centimeters per minute.

1 13. (Original) The method according to claim 1, wherein the plasma etching is  
2 conducted at a pressure in the range of about 2 mTorr to about 8 mTorr.

1 14. (Original) The method according to claim 1, wherein the semiconductor material  
2 includes indium phosphide.

1 15. (Original) The method according to claim 1, wherein the semiconductor wafers  
2 are incorporated into devices selected from the group consisting of microwave circuits,  
3 millimeter wave circuits, and combinations thereof.

1 16. (Original) The method according to claim 1, wherein the semiconductor wafers  
2 have a final thickness in the range of about 25 to about 250  $\mu\text{m}$ .
